

Team Member Contributions (Since Last Submission)

Ishrak Mulla – Menu Developer

Since the last submission, Ishrak has taken the lead on developing the **menu browsing functionality**. He researched responsive menu layouts and started building a prototype that allows users to view pizzas by category. He has also outlined how pizza customization (size, crust, toppings) will be structured in the UI. His work has been crucial in defining how customers will interact with the most essential part of the app — the menu.

Prachish Pandey – Shopping Cart Developer

Prachish has been focused on **cart functionality**. He worked on designing how items are added, removed, and updated in real time. He also drafted a cart state management plan, outlining how items will be tracked between the menu and checkout. This ensures that customer selections are consistent and persistent throughout their session. His contribution bridges menu interaction with checkout, making it one of the key components of the system.

Zeyu Zhang – Checkout Flow Developer

Zeyu has been working on the **checkout process**, including wireframing the user flow for reviewing the cart, entering delivery details, and confirming the order. He has also researched mock payment flow integration and identified the minimum data required to simulate a complete checkout. His work ensures the app ends with a clear, user-friendly confirmation page, helping the team visualize the complete customer journey.

Djoulie Saint Louis – UI/Styling Specialist

Djoulie has focused on **UI consistency and responsive design**. She developed CSS templates using Flexbox and Grid, ensuring a mobile-first approach. Her early styling prototypes make the app accessible on both desktop and mobile devices, which is critical for customer satisfaction. She has also ensured that all team members' components will share a unified look and feel.

Daniel Araujo – Integration & Navigation Developer

Daniel has worked on **overall integration and navigation planning**. He outlined how individual features (menu, cart, checkout) will be connected and created draft navigation flows with smooth transitions. He also set up the GitHub repository structure, ensuring that each member

can work on feature branches. His contributions are foundational to making sure the project's separate pieces merge into a unified application.
